SUMMARY

Aspiring **Cybersecurity Engineer** with hands-on experience in **secure system design**, **application security**, and **threat analysis**. Strong understanding of **authentication mechanisms**, **data protection**, and **vulnerability assessment**, focused on building **scalable, secure, and resilient systems**.

EDUCATION

GLS University – Faculty of Engineering and Technology <i>B.Tech in Computer Science & Engineering – CGPA: 6.90 (up to Sem 7)</i>	Ahmedabad 2022 – 2026
Vision International School of Excellence (CBSE) <i>HSC – 68.8% SSC – 61%</i>	Ankleshwar 2020 – 2022

EXPERIENCE

Bhaskaracharya National Institute for Space Applications and Geo-informatics (BISAG-N) View <i>Cybersecurity Intern</i>	Gandhinagar Dec 2025 – Apr 2026
- Developed secure authentication workflows and API security mechanisms for real-world systems. - Implemented Post-Quantum Cryptography (ML-KEM), blockchain-based identity validation, and secure data handling practices.	

PROJECTS

SATYA – Secure Digital Identity System FastAPI, JWT, PQC, Blockchain
- Designed and developed a secure digital identity platform enabling Single Sign-On (SSO) across services. - Implemented Post-Quantum Cryptography (ML-KEM) for future-proof encryption and blockchain-based audit logging for tamper-proof records. - Ensured end-to-end data protection, role-based access control, and secure API communication.
CTF Platform – Cybersecurity Competition System Node.js, React, Socket.IO
- Built a full-stack real-time platform for hosting cybersecurity competitions with multi-user support. - Implemented live scoring and leaderboard updates using Socket.IO and optimized backend performance. - Designed secure authentication flows and challenge management system for participants and admins.
NetSentry – Network Monitoring System Python, Flask, Nmap
- Developed a real-time LAN monitoring system to track connected devices and system activities. - Integrated CVE-based vulnerability assessment to identify potential security risks. - Built a dashboard for network visibility, threat detection, and system insights.

SKILLS

Languages: Python, C/C++, SQL, JavaScript, HTML, CSS
Frameworks: Flask, FastAPI, Express.js, React
Security Tools: Nmap, Wireshark, Burp Suite, SQLmap, Hydra, Nikto
Concepts: Network Security, Penetration Testing, API Security, SSO
Platforms: Kali Linux, Ubuntu, Windows

CERTIFICATIONS

Google: [Cybersecurity Professional Certificate](#)
Deloitte (Forage): [Cyber Job Simulation](#)
Cisco: [Ethical Hacker](#)
